[About this export](#)

Exported files

File formats

Some file formats (e.g. html, png) will be viewable in your browser, and will appear as clickable links below that will open the file once you've fully extracted your archive. Other file types can be opened by their appropriate applications by navigating through the archive's directory. You can click on any folders that may be present to see their contents.

Data that are still in the process of being deleted are not included in your archive. [Learn more](#) about your deleted data.

Profile

profile.csv

reading_list.csv

Data included

Your Blogger blogs, including posts, pages, comments and videos, as well as settings and your Blogger profile.

More options to manage your privacy

Google Account

[Manage your info, privacy, and make Google work better for you](#)

Below are all the possible formats you could have received in your archive:

Blog feed

The posts, pages and comments that make up a blog. For blogs that you are an admin of, you can export all posts, pages and comments. For other blogs, you can only export the posts, pages and comments that you are the author of.

Atom

Data from your blog(s) is in the standard ATOM format, which can be imported by most popular blogging software either directly or with the help of third-party tools.

Photos

Blogger photos contained in each album.

Original format/PNG/JPG/GIF

Photos uploaded in original quality will be provided in their original format. Photos uploaded in high quality may be returned in a different format.

Photos that have been edited are downloaded with the original file name ending with "-edited".

Album metadata

Data associated with each album, such as title or description.

JSON

Json is an open-standard file format that provides data in human readable form.

Photo metadata

Data associated with each photo, such as creation time or comments.

JSON

Json is an open-standard file format that provides data in human readable form.

Videos

Videos uploaded to a blog. For blogs that you are an admin of, you can export all videos. For other blogs, you can only export videos that you have uploaded.

Videos

Videos in the format originally uploaded

Followers

Information about the followers of a blog. You can only export followers of blogs that you are an admin of.

CSV

Comma-separated values

Settings

Settings for a blog. You can only export settings for blogs that you are an admin of.

CSV

Comma-separated values

Profile

Your Blogger profile.

CSV

Comma-separated values

Reading list

Your Blogger reading list.

CSV

Comma-separated values

Theme

The theme for a blog.

XML

As it appears in blogger.com theme editor

ICE.vcf

My Contacts

My Contacts.vcf

Starred in Android

Starred in Android.vcf

Data included

Contacts and contact photos you added yourself, as well as contacts saved from your interactions in Google products like Gmail.

Folder structure

Now that you've downloaded the contacts from your Google Account, you'll find folders named "My Contacts" and "All Contacts," plus additional folders if you created any labels, or starred contacts on your Android device. The "My Contacts" folder contains only those contacts you added yourself. The "All Contacts" folder contains both contacts you added yourself as well as contact info automatically saved from your interactions in Google products, like Gmail.

How to handle this export

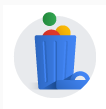

If you downloaded your contacts as a CSV file, you can view them in a spreadsheet, or import them to Microsoft Outlook or another Google Account. If you downloaded your contacts as a vCard file, you can import them to another Google Account, Mac OS, iOS, or other contacts services.

You're in control of your data in Contacts

Review your data

[You can review contacts you've added to your Google Account in Contacts](#)

Manage your data

[You can delete contacts from your Google Account in Contacts](#)

Control your data

[Go to Gmail settings to control whether contacts are created for auto-complete.](#) [Go to your Google Account to control whether contact info is saved when you interact with people in other Google products.](#)

More options to manage your privacy

Google Account

[Manage your info, privacy, and make Google work better for you](#)

Below are all the possible formats you could have received in your archive:

Contacts

CSV

For importing to MS Outlook or another Google Account

vCard

A common file format for electronic business cards used by programs such as Gmail, Microsoft Outlook, and Mac OS X contacts.

Google Account
